6-23-03

1. (Twice amended) An antibody-based fusion protein comprising at least a portion of a CH2 domain, wherein said portion comprises a domain required for immunoglobulin protection receptor (FcRp) binding affinity, linked to a non-Ig protein, wherein said CH2 domain is an IgG1 or an IgG3 CH2 domain comprising a mutation or a deletion that reduces binding affinity for an Fc receptor, and said antibody-based fusion protein has a longer circulating half-life *in vivo* than ~~(an)~~ said antibody-based fusion protein without said mutation or deletion.

2. ~~(Amended)~~ An [The] antibody-based fusion protein comprising at least a portion of a CH2 domain linked to a non-Ig protein [of claim 1], wherein said [portion of heavy chain comprises at least the] CH2 domain is [an] an IgG2 CH2 domain [or IgG4 constant region], and said antibody-based fusion protein has a longer circulating half-life *in vivo* than an antibody-based fusion protein comprising a portion of an IgG1 CH2 domain linked to said non-Ig protein.

~~1.~~ The antibody-based fusion protein of claim 1, wherein said portion of heavy chain comprises at least a portion of an IgG1 constant region having a mutation or a deletion at one or more amino acid selected from the group consisting of Leu₂₃₄, Leu₂₃₅, Gly₂₃₆, Gly₂₃₇, Asn₂₉₇, and Pro₃₃₁.

~~2.~~ The antibody-based fusion protein of claim 1, wherein said portion of heavy chain comprises at least a portion of an IgG3 constant region having a mutation or a deletion at one or more amino acid selected from the group consisting of Leu₂₈₁, Leu₂₈₂, Gly₂₈₃, Gly₂₈₄, Asn₃₄₄, and Pro₃₇₈.

~~3.~~ The antibody-based fusion protein of claim 1, wherein said portion of heavy chain has substantially reduced binding affinity for a Fc receptor selected from the group consisting of FcγRI, FcγRII and FcγRIII.

~~4.~~ The antibody-based fusion protein of claim 1, wherein said second non-Ig protein is selected from the group consisting of a cytokine, a ligand-binding protein, and a protein toxin.

~~5.~~ The antibody-based fusion protein of claim 1, wherein said cytokine is selected from the group consisting of a tumor necrosis factor, an interleukin, and a lymphokine.

~~6.~~ The antibody-based fusion protein of claim 8, wherein said tumor necrosis factor is tumor necrosis factor alpha.

~~7.~~ The antibody-based fusion protein of claim 8, wherein said interleukin is interleukin-2.

~~8.~~ The antibody-based fusion protein of claim 8, wherein said lymphokine is a lymphotoxin or a colony stimulating factor.

~~9.~~ The antibody-based fusion protein of claim 11, wherein said colony stimulating factor is a granulocyte-macrophage colony stimulating factor.

~~10.~~ The antibody-based fusion protein of claim 1, wherein said ligand-binding protein is selected from the group consisting of CD4, CTLA-4, TNF receptor, and an interleukin receptor.

27. (Amended) An antibody-based fusion protein comprising a variable domain and a portion of [a] an IgG4 CH2 domain, the C-terminus of which is linked to the N-terminus of a non-Ig protein, [wherein said CH2 domain is an IgG4 CH2 domain, and] wherein said antibody-based fusion protein has a longer circulating half-life *in vivo* than an antibody-based fusion protein comprising a portion of an IgG1 CH2 domain linked to said non-Ig protein.

2-25-98

1. (Amended) An antibody-based fusion protein ~~[with an enhanced circulating half life,]~~ comprising at least a portion of a CH2 domain required for immunoglobulin protection receptor (FcRp) binding affinity, [an immunoglobulin (Ig) heavy chain having substantially reduced binding affinity for an Fc receptor, said portion of heavy chain being] linked to a ~~[second]~~ non-Ig protein, wherein said CH2 domain is an IgG1 or an IgG3 CH2 domain comprising a mutation or a deletion that reduces binding affinity for an Fc receptor, and said antibody-based fusion protein ~~[having]~~ has a longer circulating half-life *in vivo* than an antibody-based fusion protein without said mutation or deletion [unlinked second non-Ig protein].

NM

2. (Amended) An [The] antibody-based fusion protein comprising at least a portion of a CH2 domain linked to a non-Ig protein [of claim 1], wherein said [portion of heavy chain comprises at least the] CH2 domain is [of] an IgG2 CH2 domain [or IgG4 constant region], and said antibody-based fusion protein has a longer circulating half-life *in vivo* than an antibody-based fusion protein comprising a portion of an IgG1 CH2 domain linked to said non-Ig protein.

3. The antibody-based fusion protein of claim 1, wherein said portion of heavy chain comprises at least a portion of an IgG1 constant region having a mutation or a deletion at one or more amino acid selected from the group consisting of Leu₂₃₄, Leu₂₃₅, Gly₂₃₆, Gly₂₃₇, Asn₂₉₇, and Pro₃₃₁.

4. The antibody-based fusion protein of claim 1, wherein said portion of heavy chain comprises at least a portion of an IgG3 constant region having a mutation or a deletion at one or more amino acid selected from the group consisting of Leu₂₈₁, Leu₂₈₂, Gly₂₈₃, Gly₂₈₄, Asn₃₄₄, and Pro₃₇₈.

5. The antibody-based fusion protein of claim 1, wherein said portion of heavy chain has substantially reduced binding affinity ~~for a~~ Fc receptor selected from the group consisting of FcγRI, FcγRII and FcγRIII.

6. The antibody-based fusion protein of claim 1, wherein said second non-Ig protein is selected from the group consisting of a cytokine, a ligand-binding protein, and a protein toxin.

7. The antibody-based fusion protein of claim 1, wherein said cytokine is selected from the group consisting of a tumor necrosis factor, an interleukin, and a lymphokine.

8. The antibody-based fusion protein of claim 8, wherein said tumor necrosis factor is tumor necrosis factor alpha.

9. The antibody-based fusion protein of claim 8, wherein said interleukin is interleukin-2.

10. The antibody-based fusion protein of claim 8, wherein said lymphokine is a lymphotoxin or a colony stimulating factor.

11. The antibody-based fusion protein of claim 11, wherein said colony stimulating factor is a granulocyte-macrophage colony stimulating factor.

12. The antibody-based fusion protein of claim 1, wherein said ligand-binding protein is selected from the group consisting of CD4, CTLA-4, TNF receptor, and an interleukin receptor.

NM - 27.

- (New) An antibody-based fusion protein comprising a variable domain and a portion of a CH2 domain linked to the N-terminus of a non-Ig protein, wherein said CH2 domain is an IgG4 CH2 domain, and said antibody-based fusion protein has a longer circulating half-life *in vivo* than an antibody-based fusion protein comprising a portion of an IgG1 CH2

103

09256156

2-25-98

1. An antibody-based fusion protein with an enhanced circulating half-life, comprising at least a portion of an immunoglobulin (Ig) heavy chain having substantially reduced binding affinity for an Fc receptor, said portion of heavy chain being linked to a second non-Ig protein, said antibody-based fusion protein having a longer circulating half-life *in vivo* than an unlinked second non-Ig protein.
2. The antibody-based fusion protein of claim 1, wherein said portion of heavy chain comprises at least the CH2 domain of an IgG2 or IgG4 constant region.
3. The antibody-based fusion protein of claim 1, wherein said portion of heavy chain comprises at least a portion of an IgG1 constant region having a mutation or a deletion at one or more amino acid selected from the group consisting of Leu₂₃₄, Leu₂₃₅, Gly₂₃₆, Gly₂₃₇, Asn₂₉₇, and Pro₃₃₁.
4. The antibody-based fusion protein of claim 1, wherein said portion of heavy chain comprises at least a portion of an IgG3 constant region having a mutation or a deletion at one or more amino acid selected from the group consisting of Leu₂₈₁, Leu₂₈₂, Gly₂₈₃, Gly₂₈₄, Asn₃₄₄, and Pro₃₇₈.
5. The antibody-based fusion protein of claim 1, wherein said portion of heavy chain further has binding affinity for an immunoglobulin protection receptor.
6. The antibody-based fusion protein of claim 1, wherein said portion of heavy chain has substantially reduced binding affinity for a Fc receptor selected from the group consisting of FcγRI, FcγRII and FcγRIII.
7. The antibody-based fusion protein of claim 1, wherein said second non-Ig protein is selected from the group consisting of a cytokine, a ligand-binding protein, and a protein toxin.
8. The antibody-based fusion protein of claim 1, wherein said cytokine is selected from the group consisting of a tumor necrosis factor, an interleukin, and a lymphokine.
9. The antibody-based fusion protein of claim 8, wherein said tumor necrosis factor is tumor necrosis factor alpha.
10. The antibody-based fusion protein of claim 8, wherein said interleukin is interleukin-2.
11. The antibody-based fusion protein of claim 8, wherein said lymphokine is a lymphotoxin or a colony stimulating factor.
12. The antibody-based fusion protein of claim 11, wherein said colony stimulating factor is a granulocyte-macrophage colony stimulating factor.
13. The antibody-based fusion protein of claim 1, wherein said ligand-binding protein is selected from the group consisting of CD4, CTLA-4, TNF receptor, and an interleukin receptor.
24. The antibody-based fusion protein of claim 24, wherein said colony stimulating factor is a granulocyte-macrophage colony stimulating factor.

(HA) A INCREASED HALF-LIFE.

1. An antibody-based fusion protein comprising at least a portion of a CH2 domain, wherein said portion comprises a domain required for immunoglobulin protection receptor (FcRp) binding affinity, linked to a non-Ig protein, wherein said CH2 domain is an IgG1 or an IgG3 CH2 domain comprising a mutation or a deletion that reduces binding affinity for an Fc receptor, and said antibody-based fusion protein has a longer circulating half-life in vivo than said antibody-based fusion protein without said mutation or deletion.

2. An antibody-based fusion protein comprising at least a portion of a CH2 domain linked to a non-Ig protein, wherein said CH2 domain is an IgG2 CH2 domain, and said antibody-based fusion protein has a longer circulating half-life in vivo than an antibody-based fusion protein comprising a portion of an IgG1 CH2 domain linked to said non-Ig protein → Junghans + Canfield-103

3. The antibody-based fusion protein of claim 1, wherein said portion of heavy chain comprises at least a portion of an IgG1 constant region having a mutation or a deletion at one or more amino acid selected from the group consisting of Leu234, Leu235, Gly236, Asn297, and Pro300 → Junghans + Canfield

4. The antibody-based fusion protein of claim 1, wherein said portion of heavy chain comprises at least a portion of an IgG3 constant region having a mutation or a deletion at one or more amino acid selected from the group consisting of Leu281, Leu282, Gly283, Gly284, Asn344, and Pro378.

5. The antibody-based fusion protein of claim 1, wherein said portion of heavy chain has substantially reduced binding affinity for a Fc receptor selected from the group consisting of FcγRI, FcγRII and FcγRIII.

103- 6. The antibody-based fusion protein of claim 1, wherein said second non-Ig protein is selected from the group consisting of a cytokine, a ligand-binding protein, and a protein toxin.

103- 7. The antibody-based fusion protein of claim 1, wherein said cytokine is selected from the group consisting of a tumor necrosis factor, an interleukin, and a lymphokine.

103- 8. The antibody-based fusion protein of claim 8, wherein said tumor necrosis factor is tumor necrosis factor alpha.

103- 9. The antibody-based fusion protein of claim 8, wherein said interleukin is interleukin-2.

11. The antibody-based fusion protein of claim 8, wherein said lymphokine is a lymphotoxin or a colony stimulating factor.

103- 12. The antibody-based fusion protein of claim 11, wherein said colony stimulating factor is a granulocyte-macrophage colony stimulating factor.

103- 13. The antibody-based fusion protein of claim 1, wherein said ligand-binding protein is selected from the group consisting of CD4, CTLA-4, TNF receptor, and an interleukin receptor.

27. An antibody-based fusion protein comprising a variable domain and a portion of an IgG4 CH2 domain, the C-terminus of which is linked to the N-terminus of a non-Ig protein, wherein said antibody-based fusion protein has a longer circulating half-life in vivo than an antibody-based fusion protein comprising a portion of an IgG1 CH2 domain linked to said non-Ig protein.

103- 28. The antibody-based fusion protein of claim 13, wherein said interleukin receptor is selected from the group consisting of interleukin-1 and interleukin-4 receptors.

103 = Junghans - new
Gillies - old

CH2 domain → IgG1 or IgG3

w/ FcRp binding affinity

key seems to be reduced or no affinity to Fc receptors

Non-Ig — CH2 domain of IgG1 or IgG3 w/ mutation to ↓ binding to FcR AND FcRp binding domain

Non-Ig — IgG2 CH2 domain w/ longer 1/2 life than IgG1
